

"If you can imagine it, Nadco will make it stick."

1210 (High Bond D/C Polypropylene)

DESCRIPTION: 1210 is a double coated clear polypropylene film tape which is manufactured on an 80 lb. paper release liner. 1210 is double coated with a proprietary clear adhesive system which exhibits outstanding bond strength to difficult surfaces, such as untreated polyethylene film and other synthetics. It's extremely high sheer adhesive characteristics make this product very effective for vertical bonding applications.

APPLICATIONS: 1210 can be used as a permanent closure method for polyethylene and polypropylene copolymer bags where the closure cannot be reopened without the bag being destroyed. 1210 is recommended for use on poly bags with a gauge up to .003", and is available on an extended poly liner for hot bar cutting (ITC#1510XL).

TECHNICAL DATA

Backing:	clear polypropylene film; .0012"
Adhesive:	clear synthetic copolymer high tack permanent type
Liner:	5.0 mil polysilicone type
Thickness, liner (in.):	.0050
Thickness, tape:	.0092
Adhesion (ozs./in. width):	180+
Holding power (min.):	10,000+
Tack (in.):	<1
Tensile strength (lb./in.):	22
Elongation (%):	75
Application Temp (F):	65-100
Temperature Range (F):	10-150
Extended Liner:	YES
